GUARDIAN VERIFIED FILTER PROGRAM

A controlled filter program for commercial facilities.

Survey, organize, schedule, supply, document and reconcile recurring filter requirements through one account-specific operating framework.

Chicago roots Midwest inquiries reviewed	**English and Spanish** Customer pathways available	**Account-specific** No generic scope or pricing

What the framework can include

- Initial facility and equipment survey
- Equipment register by property, building, unit and location
- Exact sizes, quantities and customer-approved specifications
- Building and equipment labeling requirements
- Scheduled material delivery or filter replacement
- Completion records and visible exception reporting
- Replenishment planning and annual inventory reconciliation

Discuss your facilities (773) 835-5323	**Email Guardian** sales@guardianfilterservice.com	**Learn more** guardianfilterservice.com

Choose the right operating level.

Guardian validates equipment, access, safety, logistics, documentation and commercial requirements before proposing service.

01 MANAGED SUPPLY

Facility survey, equipment schedule and labeled materials coordinated under the accepted scope.

02 STAGED SERVICE

Materials organized and staged by building or equipment according to agreed receiving requirements.

03 COMPLETE SERVICE

Supply, replacement, completion documentation and exception reporting within accepted written scope.

Implementation timeline

	Discovery
	Facility survey
	Verified equipment register
	Scope and quote
	Customer approval
	Activation
	Recurring service
	Annual reconciliation

A living equipment record.

The register maintains the approved operating baseline. The example below is illustrative and contains no customer data.

Equipment ID	Location	Filter specification	Qty	Interval	Next action
BLDG-A-RTU-01	Roof, north	Customer-approved size and efficiency	TBD	To be agreed	Verify survey
BLDG-A-AHU-02	Mechanical room	Customer-approved size and efficiency	TBD	To be agreed	Confirm access
BLDG-B-RTU-01	Roof, east	Customer-approved size and efficiency	TBD	To be agreed	Validate identity

Completion evidence

- Service date and responsible person
- Equipment and quantities serviced
- Observed condition before and after, where appropriate
- Inaccessible, skipped or abnormal equipment
- Recommended follow-up and next interval
- Evidence reference and customer review status

Evidence methods are defined by account. Photos, QR codes, barcodes or other verification controls are used only when authorized and operationally available.

Clear boundaries before commitment.

Guardian confirms the operating facts for each property before activation.

Account activation requires

- Verified equipment and filter identities
- Accepted territory and capacity
- Access and site-specific safety review
- Approved products and substitution rules
- Supplier and logistics availability
- Documentation and escalation requirements
- Payment, renewal and cancellation terms
- Accepted written scope and customer approval

Important limitations

An inquiry does not reserve service or create a contract. An inspection does not authorize repairs, alterations or regulated work. Material replenishment does not replace professional diagnosis, manufacturer requirements or customer safety obligations. Availability, coverage, service level and pricing are confirmed for each account.

Start with a facility assessment.
